This special micro-spy contains a "day" 2M Pixel micro-camera, a microphone and a DVR unit for local recording (without the possibility of distance sight). It works by battery (limited time) or it can be powered for working inside a car or a room.
Ideal solution when there are problems for installing other devices, for installing time problems and in any case when it is NOT necessary a real time sight what is coming in the field of vision of the front of the lens (that's because it hasn't an external control box and/or the possibility to communicate with external devices).
There is an internal 32GB audio/video registration memory (about 15-18 hours for audio/video and hundreds of hours for only the audio); then later it is possible to vision everything connecting the removable spy memory to a usual computer.
